Help Tips for 'Zero Records' - How To Get More Records

- Don't over-specify: use only the search options you really need -- leave the others blank.
- Exclude "implied concepts": leave out words like 'research' or 'effects.'
- Use more wildcards to search different word endings: use COMPUTER? in place of COMPUTER.
- Check the format of your entry. Follow the Search Tips examples shown on the search page.
- Check for misspelled words.
- Check that you are using parentheses correctly when you combine words with AND, OR, NOT.

For more tips on searching, see the [Help page](#).

Abstract: Much effort is currently underway to locate, mine, manufacture, and market diamonds for retail jewelry purposes. However, both the stability and growth of this jewelry market rests in part upon two foundations: (1) the identification that the gemstone is in fact a natural, untreated diamond; and (2) the grading systems used to evaluate the quality of the diamond that are provided by various gem testing laboratories. Research efforts at the Gemological Institute of America (GIA) are directed toward addressing the challenges posed by practical diamond identification and grading procedures. If unresolved by gemological research, such challenges could affect the retail sales of gem diamonds, which in turn can adversely influence diamond exploration, mining, manufacturing, and marketing efforts.

Subjects:

- diamond identification
- gemological properties
- diamond grading
